Chery

UX Design / UI Design

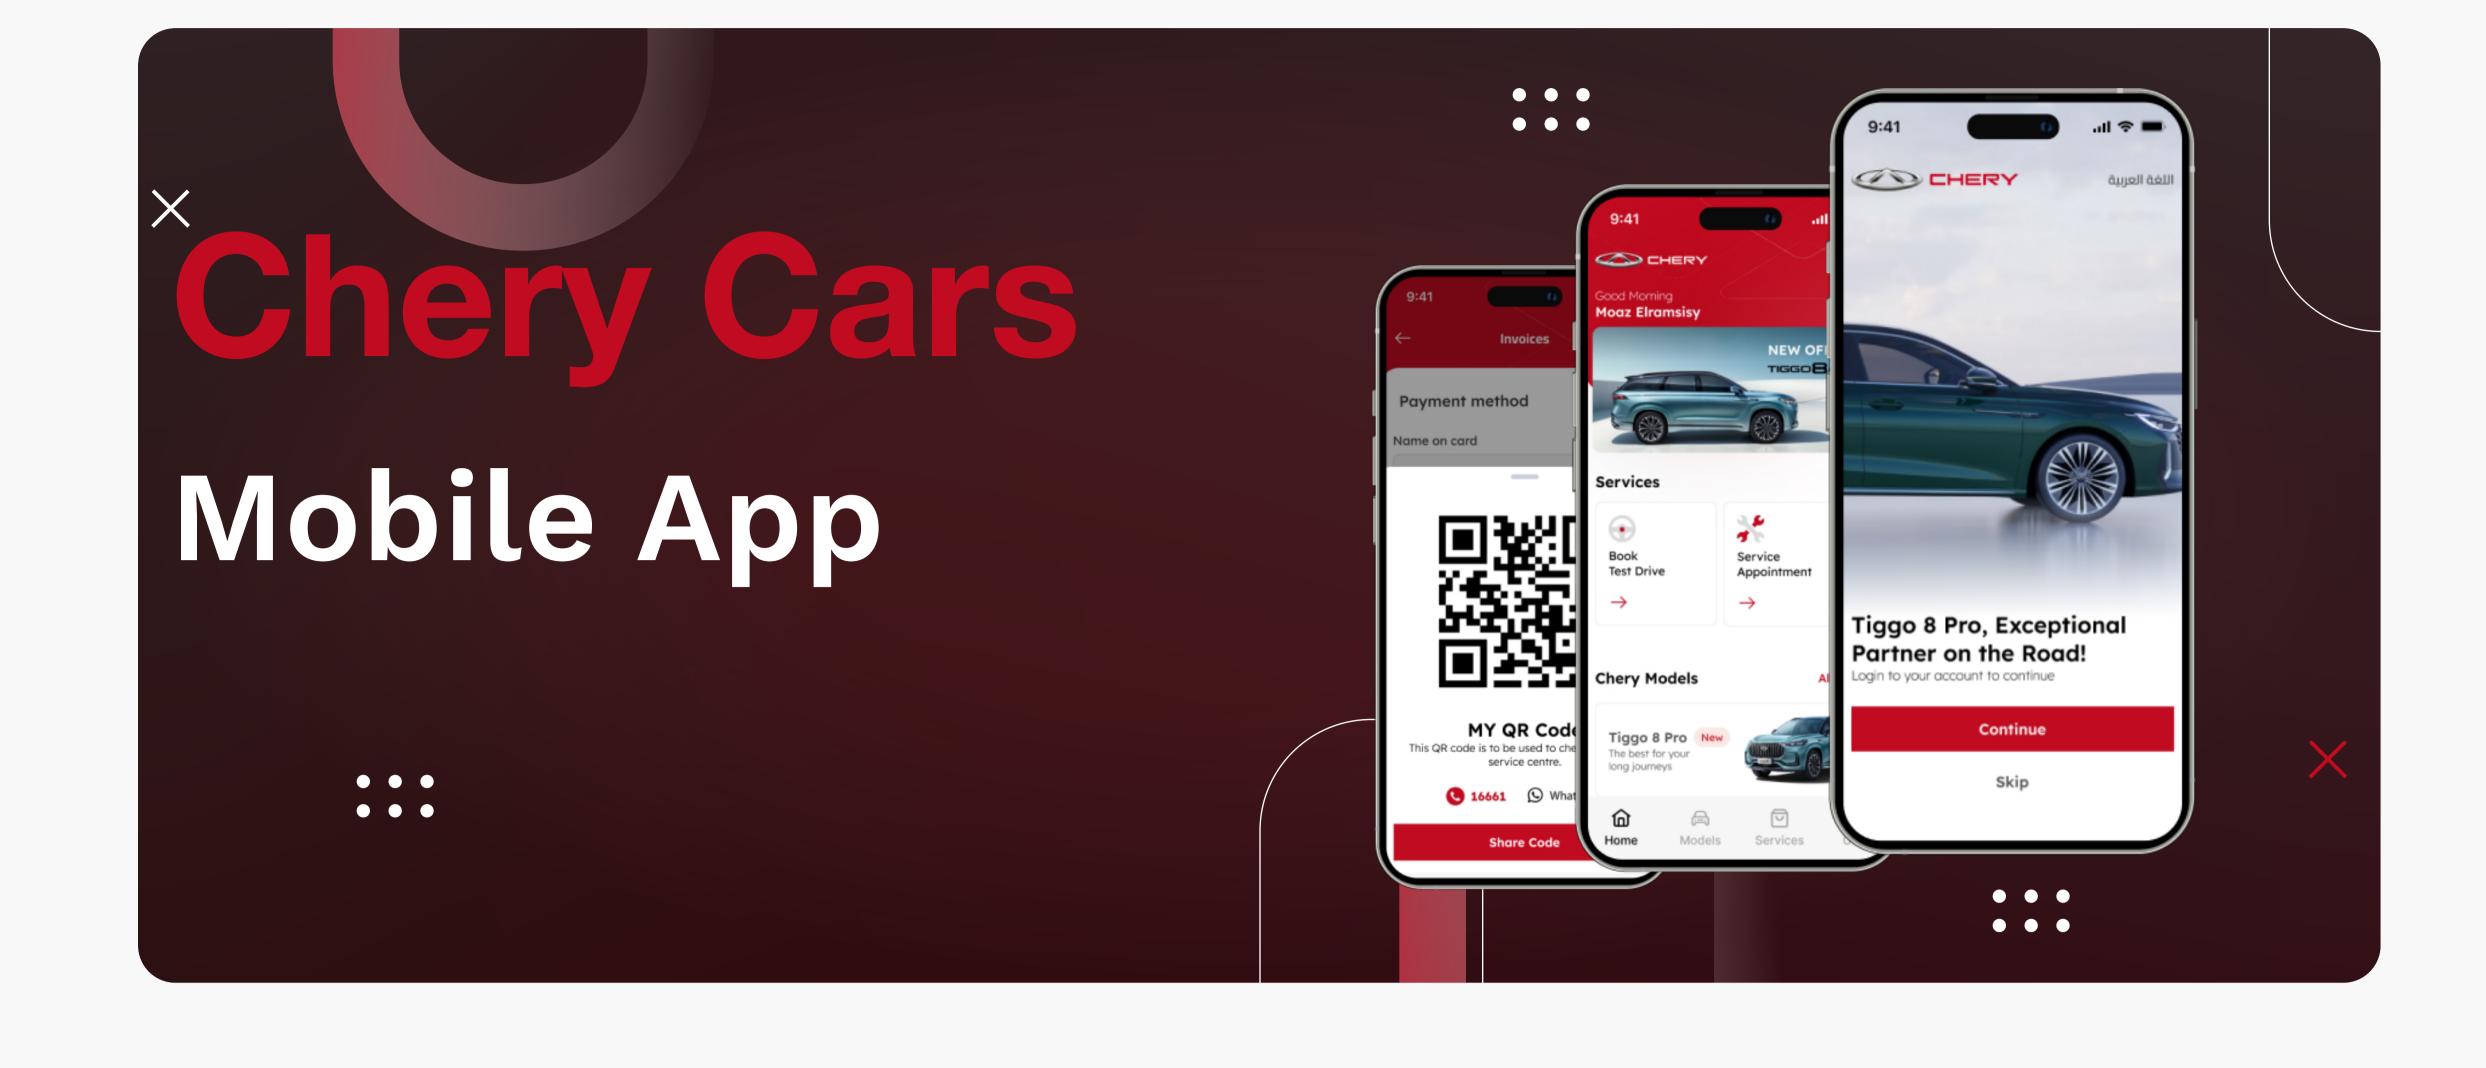

Overview

In 2023, Chery Automobile Co. needed to add new features to their mobile application, which I was assigned to create and design. The new features needed to work and complement the user journey of their users. These new features included a maintenance online payment, invoice screen and a check-out screen to check out with from the service center.

Design Process

Define

Adding a maintenance online payment feature which will allow users to pay online for the maintenance service during their visit to the service center,

The Goal

Add a view and download users current and previous invoices.

Project Goals

integrates with the existing app interface. 2. Design an intuitive and user-friendly interface for the payment process by Minimize the number of steps and provide clear

1. Ensure that the maintenance online payment feature seamlessly

3. Ensure the payment feature is responsive and works seamlessly across various devices. 4. Order Customization: Allow users to easily customize their orders

instructions to guide users through the payment process.

requests. 5. Users should have the option to set default payment methods and receive personalized notifications related to their payments.

to cater to individual preferences, dietary restrictions, and special

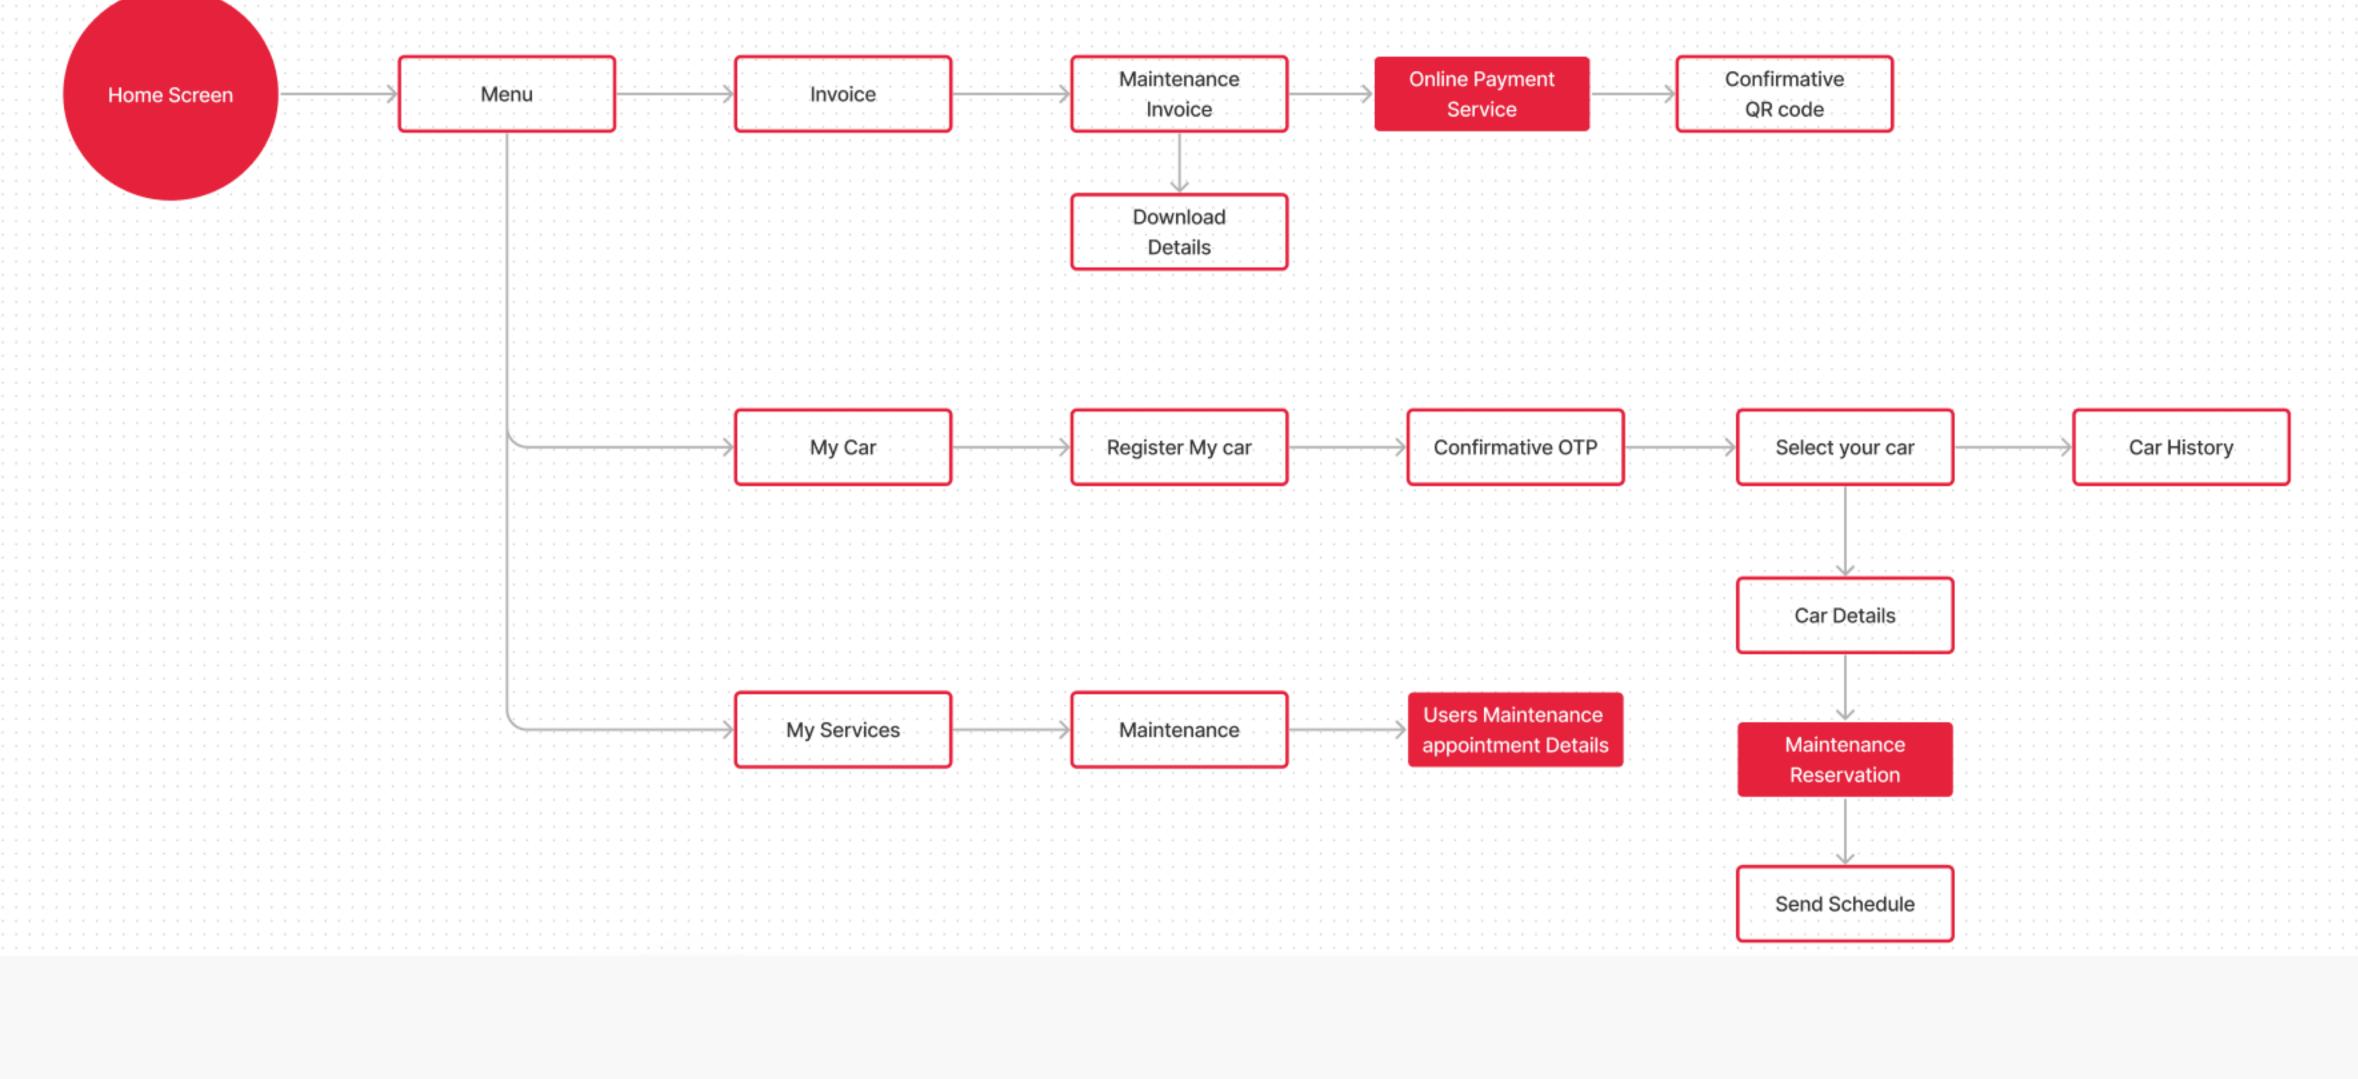

- 6. Optimize the performance of the payment feature to reduce loading times.

User Flow

pages would be necessary for the app.

User Flow

I created a user flow diagram to map out these features and see what kind of

I would like to test the design with users to validate concept so far. It would be important to find out if the app's flows and visual design resonate with users or not. I would also like to see where there are areas of improvement because continuous iterations are an integral part of the design process.
